INT. J. CONTROL, 1993, VOL. 57, NO. 6, 1517–1520

SUBJECT INDEX (VOL. 57)

Adaptive control
  convergence rate improvement, Lyapunov design, 501
  indirect, of class of interconnected nonlinear dynamical systems, 743
Adaptive dynamical feedback regulation strategies for linearizable uncertain systems, 121
Adaptive feedback stabilization in PWM-controlled DC-to-DC power supplies, 599
Adaptive sliding mode control scheme for robot manipulators, 261
Algorithm
  discontinuous, integral type, for sliding mode control, 1079
  due to Kaczmarz, interpretation, 1263
  iterative, for robust performance optimization, 799
Appendages, interconnected rigid and flexible, robust control, 29
ARMAX models, parameter bounds, from records with bounded errors in variables, 225

Circle criterion for state space systems via quadratic Lyapunov functions, 921, 957
Companion form systems matrix, Lyapunov's matrix equation solution, 1509
Compensator, frequency shaping, design for sliding mode, 1005
Compensator, LTI type, with sampler and hold, simultaneous stabilization, 293
Compensators, dynamical, for output control, with strictly positive real systems, 1101
Continuous-time control systems, fault-tolerant, stochastic stability analysis, 433
Continuous-time systems, unit sliding mode control, 1125
Controllability, decentralized integral type, 485
Controller, PID type, multivariable, self-tuning, 1387
Controllers
  in IMC schemes, use of multiple time-delays, 1443
  H_∞ type, suboptimal, synthesis over finite horizon, 351
  Lyapunov and covariance types, 519
Cost control, $\mathcal{H}_2$ guaranteed, for uncertain discrete-time linear systems, 853
Covariance and Lyapunov controllers, 519

Decentralized control for interconnected uncertain systems, extensions to higher-order uncertainties, 1453
Deconvolution, duality to feedforward control, 393
Delay systems, model reduction using Padé approximants, 377
Delta operator systems, zeros and poles, 557
Design
  frequency shaping compensator for sliding mode, 1005
  H_∞ norm- and variance-constrained, using dynamic output feedback for linear discrete systems, 473
  Lyapunov type, for convergence rate improvement in adaptive control, 501
Discrete-time linear systems
  parametric time-optimal control by state feedback, irregular Kronecker invariants, 831
  regular Kronecker invariants, 817
  uncertain $\mathcal{H}_2$ guaranteed cost control, 853
Discrete-time sliding mode control in presence of system uncertainty, 1177
Discrete-time systems
  prediction-type, reduced-order observers, 55
  unit sliding mode control, 1125
Distributed parameter systems, uncertain, stabilization, 1167
Disturbance attenuation property recovery, simultaneous loop transfer property recovery, by high gain observer, 841
Disturbance minimization, variable structure observer with boundary-layer for correlated noise/disturbance models, 1191

Eigenvalue clustering robustness in various regions of the complex plane for perturbed systems, 1469
Eigenvalue placement in specified sector for variable structure control systems, 1021
Equations, linear, systems of, approximate solutions, Kaczmarz algorithms, 1269
Estimation, optimal, unified approach using diophantine equations, 577
Euler–Bernoulli beam, control using Lyapunov functions, 971
Excitation, nonlinear, and governor control, using variable structures, 1325

Fault detection method for unknown systems with unknown input, application to hydraulic turbine monitoring, 247
Fault-tolerant continuous-time control systems, stochastic stability analysis, 433
Feedback, dynamic output type, for linear discrete systems, H_∞ norm- and variance-constrained design, 473
Feedback cyclization, dynamic, over commutative rings, geometric approach, 991
Feedback linearization, of input–output, robust, 1133
Feedforward control, duality to deconvolution, 393
Feedforward in multivariable control by individual channel design, new roles, 1357

Filtering, nonlinear, local linearization approach, 75
Frequency response computation of systems with uncertain parameters, 1293

Governor control, and nonlinear excitation, using variable structures, 1325

H^∞ control problem, discrete-time, two-Riccati formulae, 141
H_∞ control, suboptimal, over finite horizon, general formulae, 365
$\mathcal{H}_2$ guaranteed cost control for uncertain discrete-time linear systems, 853
H_∞ norm- and variance-constrained design using dynamic output feedback for linear discrete systems, 473
H^∞-optimal matrix interpolation functions, one-block type, affine parametrization, 1421
H_∞ suboptimal controllers, synthesis over a finite horizon, 351
Helicopter control law based on sliding mode with model following, 1221

ICD of 2-input 2-output systems, role of single-loop subsystems in multivariable control, 777
ICD multivariable control, new roles for feedforward, 1357
Identification
  of highly nonlinear processes, application of a general multi-model approach, 97
  of time delays in linear stochastic systems, 1273
IMC schemes, multiple time-delays as controllers, 1443
Interconnected nonlinear dynamical systems, indirect adaptive control, 743
Interconnected uncertain systems, decentralized control, extension to higher-order uncertainties, 1453
Interpolation functions, one-block H^∞-optimal matrix type, affine parametrization, 1421
Iterative algorithm for robust performance optimization, 799

Kaczmarz algorithm, 1269
Kaczmarz algorithm interpretation, 1263
Kronecker invariants, regular and irregular, parametric time-optimal control of linear discrete-time systems by state feedback, 817, 831
Kronecker rank theorem for 2D non-causal systems, 407

Large-scale dynamic systems, robustly stable, construction, 1499
Learning control, discrete, for robots, strategy, convergence and robustness, 273
Learning control systems application of Kaczmarz algorithm, 1263
Linearization
  approximate, of single input non-linear systems, numerical aspects, 463
  harmonic, in optimal control, 495
Loop transfer property recovery, simultaneous recovery of disturbance attenuation property, by high gain observer, 841
LQG balancing, functional approach, 627
Luenberger-like observer for nonlinear systems, 537
Lyapunov and covariance controllers, 519
Lyapunov design for convergence rate improvement in adaptive control, 501
Lyapunov functions
  control of Euler–Bernoulli beam, 971
  quadratic, proof of circle criterion for state space systems, 921, 957
Lyapunov's matrix equation with system matrix in companion form, 1509

Model following and sliding mode, basis for helicopter control law, 1221
Model matching problem for class of nonlinear systems, 881
Model reduction of delay systems using Padé approximants, 377
Models
  ARMAX type, parameter bounds from records with bounded errors in variables, 225
  of correlated noise/disturbance, variable structure observer with boundary-layer, disturbance minimization, 1191
  stochastic nonlinear rational type, parameter estimation, 309
Motion control systems, use of sliding modes, 1237
Multiple time-delays as controllers in IMC schemes, 1443
Multivariable control
  by individual channel design, new roles for feedforward, 1357
  role of single-loop subsystems, ICD of 2-input 2-output systems, 777
Multivariable self-tuning PID controller, 1387

Neural network learning control systems, application of Kaczmarz algorithm, 1263
Non-causal systems, 2D, Kronecker rank theorem, 407
Nonlinear control strategy for robust sliding mode performance in presence of unmatched uncertainty, 1107
Nonlinear excitation and governor control using variable structures, 1325

Nonlinear non-minimum phase systems, tracking using sliding mode control, 1141
Nonlinear processes of high nonlinearity, identification, application of general multi-model approach, 97
Nonlinear system
  Luenberger-like observer, 537
  stability boundary approximation by polytopes in state space, 197
Nonlinear systems
  dynamical sliding mode control, 1039
  with more inputs than outputs, output regulation, 1343
Nonlinear systems class, model matching problem, 881
Nonlinear variable structure systems, approximability property, 1159
Non-minimum phase nonlinear systems, tracking using sliding mode control, 1141
Non-minimum phase systems, pole assignment control, variable structure approach, 1063

Observer
  Luenberger-like, for nonlinear systems, 537
  reduced-order, causal, for generalized control systems, 1311
  variable structure type, with boundary layer for correlated noise/disturbance models with disturbance minimization, 1191
Observers
  for discrete-time systems, prediction-type, reduced-order, 55
  partially augmented, for systems with coloured noises, 335
Optimal control, harmonic linearization, 495
Optimal estimation using diophantine equations, unified approach, 577
Output control with dynamical compensators and strictly positive real systems, 1101
Output regulation of non-linear systems with more inputs than outputs, 1343

Padé approximants, use for delay system model reduction, 377
Parameter estimation for stochastic nonlinear rational models, 309
Parameter identification methodologies based on variable structure control, 1207
Parametric time-optimal control of linear discrete-time systems by state feedback
  regular Kronecker invariants, 817
  irregular Kronecker invariants, 831
Parametrization, affine, of all one-block H^*-optimal matrix interpolating functions, 1421
Perturbed systems, robustness of eigenvalue clustering in various regions of the complex plane, 1469
Pole assignment control, of non-minimum phase systems, variable structure approach, 1063
Polytopes in state space, nonlinear system stability boundary approximation, 197
Power converters, use of sliding modes, 1237
Power supply, DC-to-DC, PWM-controlled, adaptive feedback stabilization, 599

Rank theorem, Kronecker type, for 2D non-causal systems, 407
Recovery of loop transfer property and simultaneous recovery of disturbance attenuation property by high gain observer, 841
Reduced-order causal observer for generalized control systems, 1311
Regulation
  of output of nonlinear systems, with more inputs than outputs, 1343
  strategies, adaptive dynamical feedback type, for linearizable uncertain systems, 121
two-Riccati formulae for the discrete-time H^*-control problem, 141
Robot discrete learning control, strategy, convergence and robustness, 273
Robot manipulators, adaptive sliding mode control scheme, 261
Robotic arm trigonometric trajectory generator, 505
Robotic manipulators, minimum-time control laws, 1
Robust control of time-delay systems using Smith predictor, 1405
Robust input–output feedback linearization, 1133
Robust performance optimization, iterative algorithm, 799
Robust stability
  and performance of system with structured and bounded uncertainties, extension of guaranteed cost control approach, 999
  of time-delay systems with an uncertain time-delay constant, 865
Robustly stable large-scale dynamic systems construction, 1499
Robustness of eigenvalue clustering in various regions of the complex plane for perturbed systems, 1469

Sampled low-pass systems, stable zeros, 1485
Single input non-linear systems, approximate linearization, numerical aspects, 463
Single-loop subsystems in multivariable control by individual channel design of 2-input and 2-output systems, 777
Sliding mode
  in power converters and motion control systems, 1237
  performance, robust, in presence of unmatched uncertainty, nonlinear control strategy, 1107
  using discontinuous control algorithms of integral type, 1079
  with model following, basis for helicopter control law, 1221

Sliding mode control
discrete-time, in presence of system uncertainty, 1177
dynamical, of nonlinear systems, 1039
for tracking nonlinear non-minimum phase systems, 1141
in continuous and discrete-time systems using unit control, 1125
scheme, adaptive, for robot manipulators, 261
Smith predictor in robust control of time-delay systems, 1405
Stability margins for linear control systems subject to real parameter variations, computation, 453
Stabilization
adaptive feedback type, in PWM-controlled DC-to-DC power supplies, 599
of uncertain distributed parameter systems, 1167
simultaneous, using an LTI compensator with a sampler and hold, 293
Stochastic nonlinear rational models, parameter estimation, 309
Stochastic stability analysis for continuous-time fault tolerant control systems, 433
Stochastic systems, linear, time delay identification, 1273
Super-optimality as control tool, evaluation, relative stability perspective, 767

Time-delay, multiple, as controllers in IMC schemes, 1443
Time-delay identification in linear stochastic systems, 1273
Time-delay systems
robust control using Smith predictor, 1405
uncertain, robust stability, stabilization by variable structure control, 237
with uncertain time-delay constant, robust stability, 865
Tracking nonlinear non-minimum phase systems using sliding control, 1141
Trajectory generator, trigonometric, for robotic arms, 505
Turbine, hydraulic, monitoring of, application of fault detection method for unknown systems with unknown input, 247

Uncertain discrete-time linear-systems, $\mathcal{H}_2$ guaranteed cost control, 853
Uncertain distributed parameter systems, stabilization, 1167
Uncertain parameter systems, frequency response computation, 1293
Uncertain systems
interconnected, decentralized control, extension to higher-order uncertainties, 1453
linearizable, adaptive dynamical feedback regulation strategies, 121
Uncertain time-delay constant time-delay systems, robust stability, 865
Uncertain time-delay systems, robust stability, stabilization by variable structure control, 237
Uncertainties, structured and bounded, robust stability and performance by extended guaranteed cost control approach, 999
Uncertainty of system in discrete-time sliding mode control, 1177
Uncertainty, unmatched, in nonlinear control strategy for robust sliding mode performance, 1107
Unknown systems with unknown input, fault detection method, application to hydraulic turbine monitoring, 247

Variable structure approach to pole assignment control of non-minimum phase systems, 1063
Variable structure control basis for parameter identification methodologies, 1207
Variable structure control stabilization of uncertain time-delay systems, robust stability, 237
Variable structure control systems, eigenvalue placement in specified sector, 1021
Variable structure observer with boundary-layer for correlated noise/disturbance models and disturbance minimization, 1191
Variable structure systems, nonlinear, approximability property, 1159

Zeros, stable, of sampled low-pass systems, 1485
